

Vernacular Names for some of the better-known Mammals
in the Central Province, Tanganyika Territory

By G. H. Swynnerton

MANY OF MY SAFARIS take me to the remoter parts of the Central and Western Provinces, far from pubs and clubs and tiresome telegrams, to places which are rarely visited by Europeans for reasons of inaccessibility. I can well imagine that many people would find these unknown parts extremely boring and, indeed, I am often asked what I do in my spare time when the day's work is over. My answer is that I rarely have a spare minute when I am on safari. There are always traps to be set, skins to be prepared and notes to be written up on things that have been observed during the day. This paper is the result of many so-called "leisure" hours after the official work is rounded off, hours often spent round the camp fire in the evening. It is at such times as these that one gleans much interesting information about animals and the customs of the local natives, for a camp fire has a loosening effect on tongues and the presence of "Bwana Nyama" is often temporarily forgotten.

I went about this task of collecting names of animals in the wrong way, placing too much faith in the axiom that Swahili would get me everywhere. In zoology, Swahili is of little use since the Waswahili are an urban people and have little to do with wild-life and indeed have few names for the animals of the bush and plains. By giving a verbal description of, and the Kiswahili word for, an animal I advanced up to a certain point and collected local names for many of the larger and better-known mammals. But I soon came on a stumbling block, for whereas whole groups of animals are lumped together under one name in Kiswahili, other tribes have a separate name for every species of the group. Two examples are sufficient to demonstrate the narrowness of Kiswahili: as every one knows there are many colours, shapes and sizes of rats and mice in Tanganyika. With few exceptions these are all referred to as *panya* in Kiswahili. Again, there are at least seven genera of mongooses, all of which are lumped together as *nguchiro* by the Waswahili, whereas most genera are given a distinct name by up-country tribes.

I proceeded to collect and preserve specimens of as many of the smaller mammals as possible and, armed with these and with a selection from the departmental collection, I travelled around and showed them to representatives of as many tribes as possible. It was grand to see how interested the Africans became when shown a skin which had been stuffed to represent in a slight degree the living animal. An immediate improvement was noticeable and I was enabled thus to fill many gaps in my lists. That there are still some spaces left blank is regretted but I feel that the time has now arrived when I should publish my results in the hopes of drawing additional names from readers. I do not claim that the following lists are one hundred per cent

accurate. They are not, and I will be indebted to anyone who will point out errors. I am particularly doubtful about some of the Masai and Kindiga names.

In the accompanying table twenty-two tribes and sub-tribes are represented which live in and on the borders of the Central Province, to which has been added Kiswahili as the possible *lingua franca* of the future. In deciding what animals to include I have limited my lists (a) to those animals for which I have a definite record of occurrence within the Central Province, and (b) to those for which I have been able to collect at least six vernacular names. Such well known animals as the topi and situtunga do not occur in the area under consideration. The gerenuk, *Lithocranius walleri* (Brooke) (*E'nainjät* in Masai) occurs in Masailand right up to and possibly just across the Kondoa boundary in the region of Kikori. The suni or pygmy antelope, *Nesotragus moschatus*, von Dueben (*gof* or *goof* in Sandawe), has been recorded by Jackson (1930) from the Swagaswaga area to the north of Sandawe in Kondoa District. These last two species are not included in the accompanying table as I have been unable to collect more than a few vernacular names for each.

Of the tribes mentioned below the majority are of Bantu origin and to denote the language of such tribes the prefix *ki-* is added to the root of the tribal name; thus the language of the Swahili is Kiswahili. For the remaining tribes, which are not of Bantu origin, the prefix "*ki-*" is an anomaly and is dropped (though sometimes used in speech), the root of the tribal name only being given. In the language of the Fiome, Asi, and Burungi diphthongs are rare, the vowels being pronounced separately. To denote this I have inserted an apostrophe to denote a distinct break between adjacent vowels, as in the word *dama'imo*. (Is this equivalent to the glottal stop in Arabic?) Soft gutturals are represented by *kh*, hard gutturals by *gh*. The Sandawe and Kindiga (sometimes incorrectly referred to as Tindiga) employ clicks similar to those used by the Zulus. These clicks are represented by the conventional *c*, *gq*, *q*, and *x* used in writing the Zulu language. The nasal vowel is represented by (*n*) placed after the vowel letter. In most words the stress is on the penultimate syllable but where this is not so, the accented syllable is indicated by an accent, as in the word *tékele*. Where the consonants *ng* (written thus) occur in a word, the *g* is hard as in "finger"; when they are written *ng'* the *g* is soft as in "singer".

In certain instances I have borrowed names from other authors. Where this has been done I have indicated the fact by placing the author's initials after the borrowed word. Thus, "(CFMS)" is placed after words borrowed from Swynnerton (1936), and "(AL)" from various works by Loveridge, "(D)" from Johnson's (1939) *Swahili-English Dictionary*, "(CM)" from Copley and Mayer (1934), "(RH)" from Roosevelt and Heller (1915), "(JHB)" from the Jagdhandbuch (1912), "(CHS)" from Stigand (1913).

It is hoped that this paper will be of use to officials and non-officials and in schools, and that it will afford an insight into the difficulties experienced by natives when being "dealt with" by Europeans. I give as an example of the

misunderstanding which occurs through ignorance of the local language the case of a well-known Government official, all keyed up for shooting duck (*bata* in Kiswahili) and armed with his 12-bore and few remaining and very precious "Number Four" cartridges, who was very irate with his Mgogo guide when, after a tiring walk through thorn-bush, was eventually shown a very fine Impala ram (*mbata* in Chigogo). A point which has struck me forcibly while collecting these names is that I have had to rely in most instances on the old men for my information since the younger generations did not appear to know their own tribal names for many of the animals living around them. This bears out what Moreau (1940) found when collecting the names of birds.

I am indebted to Dr. C. H. N. Jackson for reading through the draft of this paper and for making certain corrections and suggestions which I have incorporated. He has kindly allowed me to use certain words collected by himself, such words being followed by "(CHNJ)".
